

# FEATURES AND BENEFITS

- . High efficiency Climatuff compressor
- . Spine Fin aluminium outdoor coil
- . Steel cabinet, full coil protection
- . Decorative steel top
- . Fast draining base pan assembly
- . Liquid line filter-drier
- . Single side service access
- . Vertical air discharge
- . High ambient cooling to 46°C
- . Factory supplied charge of F 22
- . Weather resistant powder paint
- . Designed for easy installation
- . Low ambient heating to - 18°C
- . Compressor crankcase heater provided
- . Compressor internal overload protection
- . Built in start kit
- . Brazed refrigerant couplings
- . Weatherproof electrical controls
- . High performance coils
- . Swing flow louvres in each airhandler
- . Fresh air intake (optional)
- . Maximum efficiency air flow
- . Time delay protection
- . Internal pressure relief valve provides pressure protection
- . Electronic time / temperature defrost system
- . Ceramic coated screws

## Spine Fin Cooling Systems

Today's customers are looking for better value in the airconditioning systems they buy. Customers want durability, reliability, high efficiency, low noise levels and competitive prices. Trane's product line meets all these customers expectations.

Our passion to be the best led to the development of products so reliable they carried the first manufacturers 10 year limited warranty on the compressor and coil. If it carries the Trane name, you can be assured of the best quality money can buy.

### MANUFACTURING CONTROL

Three decades of manufacturing experience have generated an impressive body of evidence to document the advantages of Trane equipment.

### STANDARDIZED CABINETS

All cabinets have been standardized, so whether you are servicing an outdoor unit or an indoor unit all components are in the same location from unit to unit.

### CONDENSOR COIL

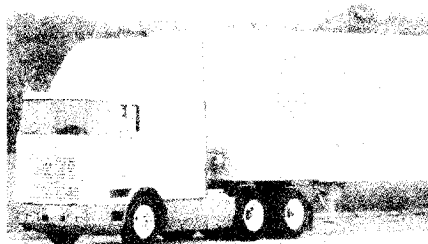

What the outdoor coil is made of and how well it is designed and manufactured determines how efficiently it does the job. Our coil is durable even in corrosive coastal locations.

### DESIGNING THE DETAILS

Careful attention was given to designing the details from control wiring to the access panels. Our units feature removable panels which allow complete access to all major components and controls. All outdoor units feature external high and low pressure gauge port connections, and service valves for easy diagnosing and servicing of the unit are provided.

### COMPRESSOR

The old saying "If you want it done right, do it yourself" applies to our compressors as well. We "Do it ourselves" so it's done right. Each one meets our engineers exacting specifications. The Climatuff compressor is designed to give you years of comfort.

### A.R.I. STANDARD CAPACITY RATING CONDITIONS

A.R.I. STANDARD 210 - Cooling 27°C, DB 19.5 °C WB air entering  
RATING CONDITIONS indoor coil 35°C D.B. air entering outdoor coil.

A.R.I. STANDARD 270 - Noise rating numbers are determined with  
RATING CONDITIONS the unit in cooling mode. Standard noise rating is at 35°C
